Legionella Risk Assessments & Reviews

Legionella Risk Assessments and Legionella Risk Assessment Reviews from Bradley Environmental Consultants

Our Legionella risk assessments are undertaken by experienced and qualified assessors. We can provide Legionella risk assessments and reviews to cover any building type or work place environment.

Whether you need to conduct a programme of Legionella risk assessment across a portfolio of properties or on a single site, Bradley Environmental are ready to help, with Legionella risk assessors based in each of our four office locations we are well positioned to service national and local clients.

Do all work places need a Legionella risk assessment?

The HSE's Approved Code of Practice and guidance; (L8) Legionnaires Disease. The control of Legionella bacteria in water systems. Applies to any undertaking involving a work activity and to premises controlled in connection with a trade, business or commercial enterprise or undertaking, where water is used or stored which can be transmitted in an aerosol and then be inhaled, there will be a reasonably foreseeable risk of exposure to Legionella bacteria.

As a result of this, if you have water services on your site you will need to carry out a Legionella risk assessment of your site to identify the level of risk and to identify control measures that may need to be put into place to reduce the level of risk to an acceptable level.

What can Bradley Environmental provide?

- Legionella Risk Assessments of your property or portfolio of properties.
- Provision of Legionella Awareness training courses.
- Production of your organisations Legionella Management Plan.
- Design of monitoring programme if required.
- Provision of Log Books for record keeping.
- Training of your own staff to carry out regular monitoring requirements.
- Analysis of water samples to determine the presence of Legionella bacteria.

Unlike many other companies we are not associated with companies offering remediation or treatment services, so have no benefit in recommending expensive ongoing monitoring programmes or remediation works. Operating as independent specialists we offer uniquely focused solutions that are targeted towards supporting our clients in the implementation of practical, cost effective solutions in Legionella risk management, and as such we gain no benefit from the actions and recommendations that our assessors provide.

Bradley Environmental Consultants has experience of undertaking Legionella risk assessments for a wide range of clients covering many building types, including:

- Domestic properties.
- Nursing and Care homes.
- Sheltered accommodation sites.
- Hotels, pubs and B&Bs.
- Industrial and Manufacturing sites.
- Dental Practices and GP Surgeries.
- Universities, Schools and Colleges.
- Office premises.
- Retail outlets.
- Gyms and leisure clubs.

Call or e-mail us today to discuss your requirements or questions. Our team will provide you with a free no obligation quote to undertake your Legionella risk assessment and will be more than happy to discuss the findings of the risk assessment and what you need to do next.
